Errors Faced During Project

1. VMware Installation Errors

Error	Description	Solution / Workaround
Time Error	Installation stops and asks to “Press any key”	Press any key when prompted.
BIOS/UEFI Error	When show netwrok dowlandor something els. So Some Pc are legacy boot syetm so they don’t suport UEFI .U have to chnge .	Edit VM → Options → Advanced → Switch UEFI to BIOS or BIOS to UEFI.
License Error	ISO selected incorrectly at start	Don’t select ISO at the start. Select ISO after OS installation.

2. ADDS / User Errors

Error	Description	Solution / Workaround
Test user login fails on same server	When testing login with a domain user on the same server where the domain controller is, login fails	Go to Domain Controller → Default Policy → Allow the test user/domain user to log in locally. This error happens only on the same server; domain join on another server works fine.
Domain join fails / DNS not resolving	Server cannot join domain because domain resolution fails	Ensure DNS settings point to the DC (Domain Controller) for proper name resolution.

3. Windows Admin Center Errors

Error	Description	Solution / Workaround
Admin cneter login fails on Edge Broswer	Cannot log in via Edge browser on server2019 because there some error	Download Chrome on the server → login via Chrome.

4. VMware Networking & Communication Errors

Error	Description	Solution / Workaround
Servers cannot communicate inside VMware	VMs on different networks cannot see each other	Use **Bridged Networking** so all VMs are on the same subnet and can communicate.
VPN connection fails due to protocol off	Default Windows Server protocols (e.g., SHTP) are off	Manually enable the required VPN protocols to allow connection.

VMware Tools / Copy-Paste Issues

Error	Description	Solution / Workaround
Copy-Paste between VM and host fails	Cannot copy/paste files between VM and real machine	Install VMware Tools ISO then : VM → Settings → Select VMware Tools Install → Then on machine go to drive d then complete wizard and insatal iso . After installation, copy-paste works.

---

6. RAM / Performance Issues

Error	Description	Solution / Workaround
Low RAM on host PC	Running multiple servers causes lag or crashes	Assign more RAM to the active server. Suspend or assign less RAM to other VMs temporarily. Resume and adjust RAM on other VMs later.
